

Thera-Paw Boot Custom Modifications

Custom modifications can be made for an additional charge.

Determine the correct Thera-Paw size using the Paw Width, Length, and Circumference measurements. Then, measure your dog's Wrist/Ankle Circumference and Height as per standard measuring instructions.

- If your dog's paw Circumference is WIDER (your measurement is greater) than the determined paw size, then the Thera-Paw boot needs to be widened (this style modification is called the "Expanded Toe Box").
- If your dog's Wrist/Ankle Circumference is WIDER (your measurement is greater) than the determined paw size, then the Thera-Paw boot cuff needs to be widened [we widen the cuff of the boot by adding more neoprene (stretchy material) to the cuff].
- If your dog's Wrist/Ankle Height is SHORTER (your measurement is less) than the determined paw size, then the Thera-Paw boot cuff needs to be cut down.

Most custom modifications can be done in 2-5 business days + shipping to NZ (allow 10-15 working days). Please account for this additional time before placing your order. We will confirm estimated arrival time when we have received your order and have confirmation from the manufacturer. Please note that custom orders are non-refundable and not exchangeable.

Other modifications are also possible. Please contact us for more information on modifications (info@reddogrehab.co.nz)
